

VAISALA

How is AQT560 revolutionizing air quality monitoring?

1 Near-reference grade particle measurement accuracy in PM1, PM2.5 and PM10 with Vaisala's proprietary laser particle counter

2 The only compact air quality sensor that does not need co-location correction or data post processing for reliable measurements

3 Innovations in production calibration and new algorithms have minimized dependencies on different environmental factors

4 Extremely low sensor-to-sensor variation allows you to trust that the data from your sensor network is comparable

Result:

AQT560 is the best-in-class air quality instrument for helping EPAs, cities and industrial facilities meet the challenge of cleaner air for all.
